

Wastewater Capital Improvements Program Project

SS7261 – Lake Katherine Sewer Line Capacity Enhancement Project Details:

Sewer Basins: Gills Creek

Project Description and Purpose:

This project proposes the replacement of sanitary sewer piping to upsize the existing gravity sewer for approximately 12,700 linear feet with new 30-inch, 36-inch, and 42-inch diameter gravity sewer. The project is located generally along Penn Branch, Lake Katherine, and Gills Creek from an area near the intersection of E. Buchanan Dr. and N. Beltline Blvd. to the intersection of Crowson Rd. and Devine St. The purpose of this project is to increase the capacity of the gravity sewer to meet current and projected capacity needs due to growth and development in the surrounding area. Increasing sewer capacity in the area will reduce sanitary sewer overflows (SSOs) along the existing major trunk line.

Approximate Budget	Status of Project – Under Design	End Date
\$17.5 million	<div style="border: 1px solid black; width: 100%; height: 40px; margin-bottom: 5px;"></div> <p style="text-align: center;">Estimated Construction Start Date July 2018</p> <p style="text-align: right;">0% Complete</p>	Spring 2020

Public Benefit of Project:

- Increased Operational Efficiency and Reliability
- Reduced Potential for Sanitary Sewer Overflows
- Improved Ability to Meet Increased Capacity Requirements
